

PAWTECTION

Behavioural Design App

INM204SCC
Rupali

The Cause & Project Definition

PURPOSE

To protect vulnerable animals in India by fostering empathy and encouraging community action.

WHAT

To launch “Pawtection,” a mobile platform that connects animal lovers, NGOs, veterinarians, and local authorities.

HOW

By partnering with NGOs, using location tracking to report abuse, and creating a reward system for volunteers.

WHERE

The initiative will begin in high-need states across India, focusing on urban areas and wildlife protection efforts.

WHO

The app is for the general public, students, volunteers, governments, and NGOs who witness animal suffering and want to help.

WHEN

The app will be launched in early summer and during festive seasons, with wildlife campaigns rolled out before winter poaching season spikes.

App Design

Features

Features

CULTURE

Multilingual Support: Offering the app in multiple Indian languages for wider accessibility.

Localized Imagery: Using visuals of animals culturally significant in India to build a stronger connection.

Community-Oriented Features: Leveraging India's strong community values through its social feed and volunteer features.

Seasonal Campaigns: Addressing animal welfare issues that arise during specific cultural festivals and events.

Building Trust: Partnering with reputable Indian NGOs to establish credibility and encourage participation.

Design that Connects: Emotion & Neuroscience

Empathy: The “Report Cruelty” feature taps into a user’s empathy and sense of urgency. The design should use colors (e.g., a prominent red or orange button) and clear language to make this action easy and immediate

Hope & Empowerment: The “Adopt/Donate” and “Volunteer” sections should use a positive color palette (e.g., greens and blues) and encouraging messaging to make users feel like they are making a real difference.

Trust: The “Find Help Near You” and “Educational Hub” features build trust by providing reliable, verified information from NGOs and vets.

ETHOS

Credibility

PATHOS

Emotion

LOGOS

Logic

Ethos (Credibility): Your app builds credibility by partnering with respected NGOs like PETA India and Wildlife SOS. The “verified” badges for NGOs and vets will also build user trust

Pathos (Emotion): The app uses emotional appeal through success stories, photos of rescued animals, and reports of animal cruelty to motivate action and donati

Logos (Logic): The “Educational Hub” and “Indian Animal Protection Laws Explained” sections appeal to logic by providing clear facts, data, and legal information to inform users.

Neurotransmitter

Dopamine: The “Gamification” and “Rewards System” (earning badges, leaderboards) will release dopamine, creating a pleasurable and addictive feedback loop that encourages users to volunteer more and report more cases.

Oxytocin: The “Community Feed” where users share success stories and connect with other animal lovers can trigger oxytocin, the “bonding” hormone, fostering a sense of belonging and social connection.

Serotonin: The feeling of accomplishment from helping an animal, earning a badge, or seeing a rescue story can increase serotonin levels, leading to a sense of well-being

Game Theory

The **Reward system** (badges, leaderboards) encourages participation by making helping animals a competitive and rewarding game. This turns a social problem into a collective challenge where individuals are motivated to contribute.

The Hook Model

TRIGGER

ACTION

Octalysis Core Motivators

Meaning & Calling: Users feel they are part of a greater cause (helping animals).

Development & Accomplishment: Earning badges, seeing their volunteer hours add up.

Empowerment of Creativity & Feedback: Users can create their own posts, and their reports lead to real-world action.

Social Influence & Relatedness: The community feed, connecting with other animal lovers.

Scarcity & Impatience: Timed events or campaigns can create a sense of urgency.

Unpredictability & Curiosity: The variable rewards system and new posts on the community feed.

Ownership & Possession: Building their profile, earning badges, and being part of the “Pawtection” community.

Loss & Avoidance: The fear of an animal suffering if they don’t act quickly.

Behaviour Change Strategies

Gamification: Turning actions into a game to increase motivation.

Social Proof: The community feed shows that others are also helping, encouraging more people to join.

Nudges: Timely push notifications remind users to take action.

Making it Easy: The streamlined “Report” feature reduces friction, making it simple for people to help.
